# ABOUT US

---

## PROVEN EXPERIENCE

For over 30 years Buonocore has been involved in the installation of special ceramic tiling in the agribusiness industry.

We directly take care of the implementation of all phases of the project and stand beside our client to choose the best solution in order to meet their needs.

## TAILOR-MADE SERVICES

- Flooring design in every detail
- Installation of sanitary sewage systems and drainage networks
- Installation of floor, wall tiles and technical accessories
- Advice on installation of technical waterproofing

## HIGH-QUALITY TECHNOLOGIES AND MATERIALS

Upon request, we are able to provide our customer with all the constituent materials of hygienic anti-acid flooring. During our experience we have tested with our own hands and chosen the best materials in order to ensure our customer's efficiency, hygiene and durability.

## PRE AND AFTER SALES SUPPORT

We offer pre- and post-sales support with highly qualified workforce.

## OUR SECTORS:

DAIRY

WINE

CANNING

BOTTLING

OIL

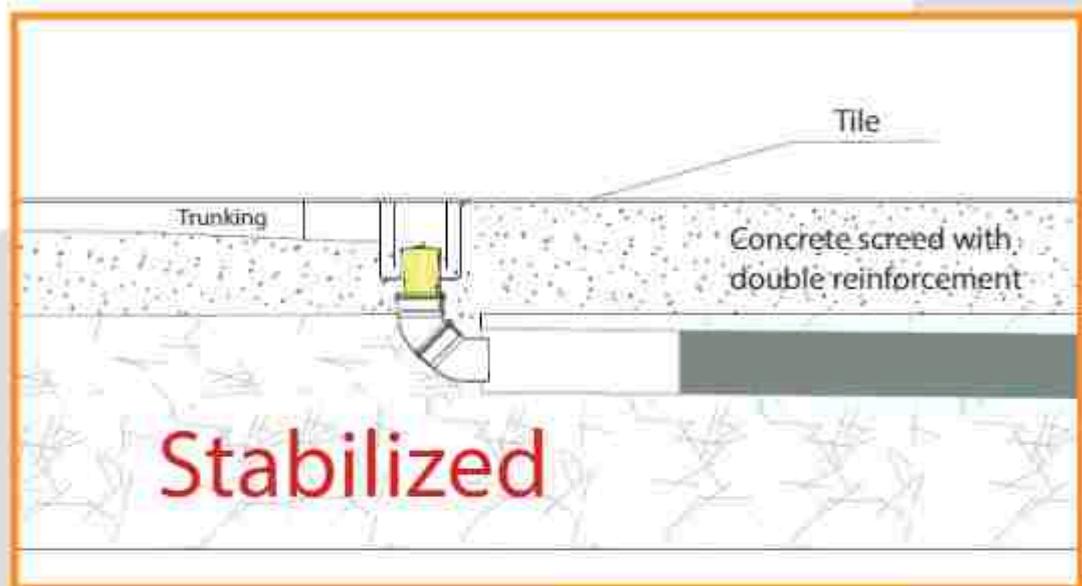

PHARMACEUTICAL

MEAT

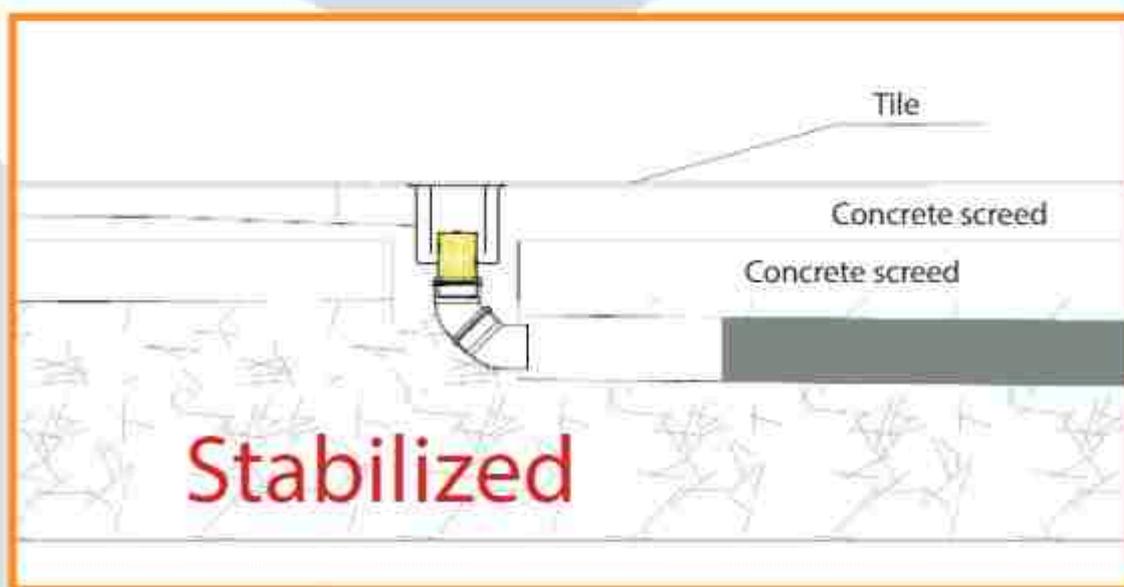

# TECHNICAL OFFICE

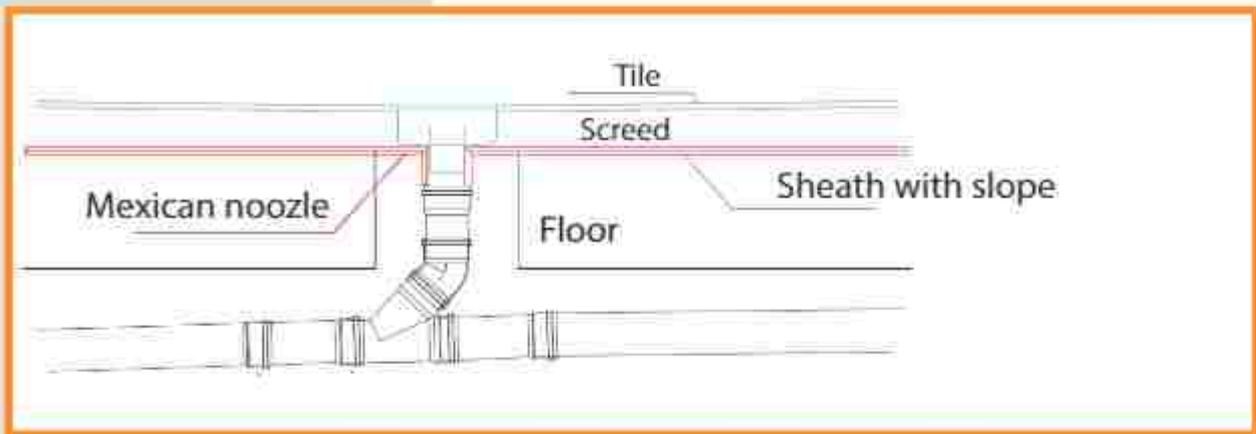

Buonocore System employs qualified technicians, who follow the client from design, to the solutions and optimal implementation of the flooring.

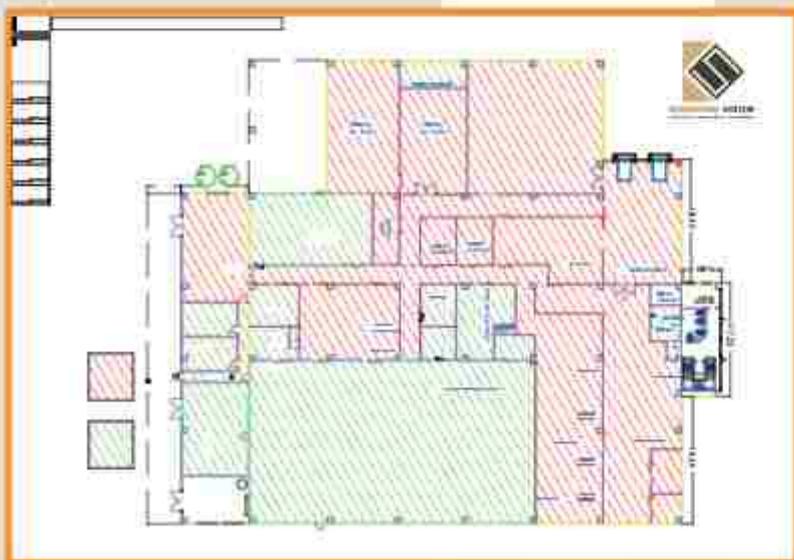

- Floor section with concrete screed on stabilized

- Floor section concrete screed on stalls

- ◆ Floor section on the floor slab

# INSTALLATION

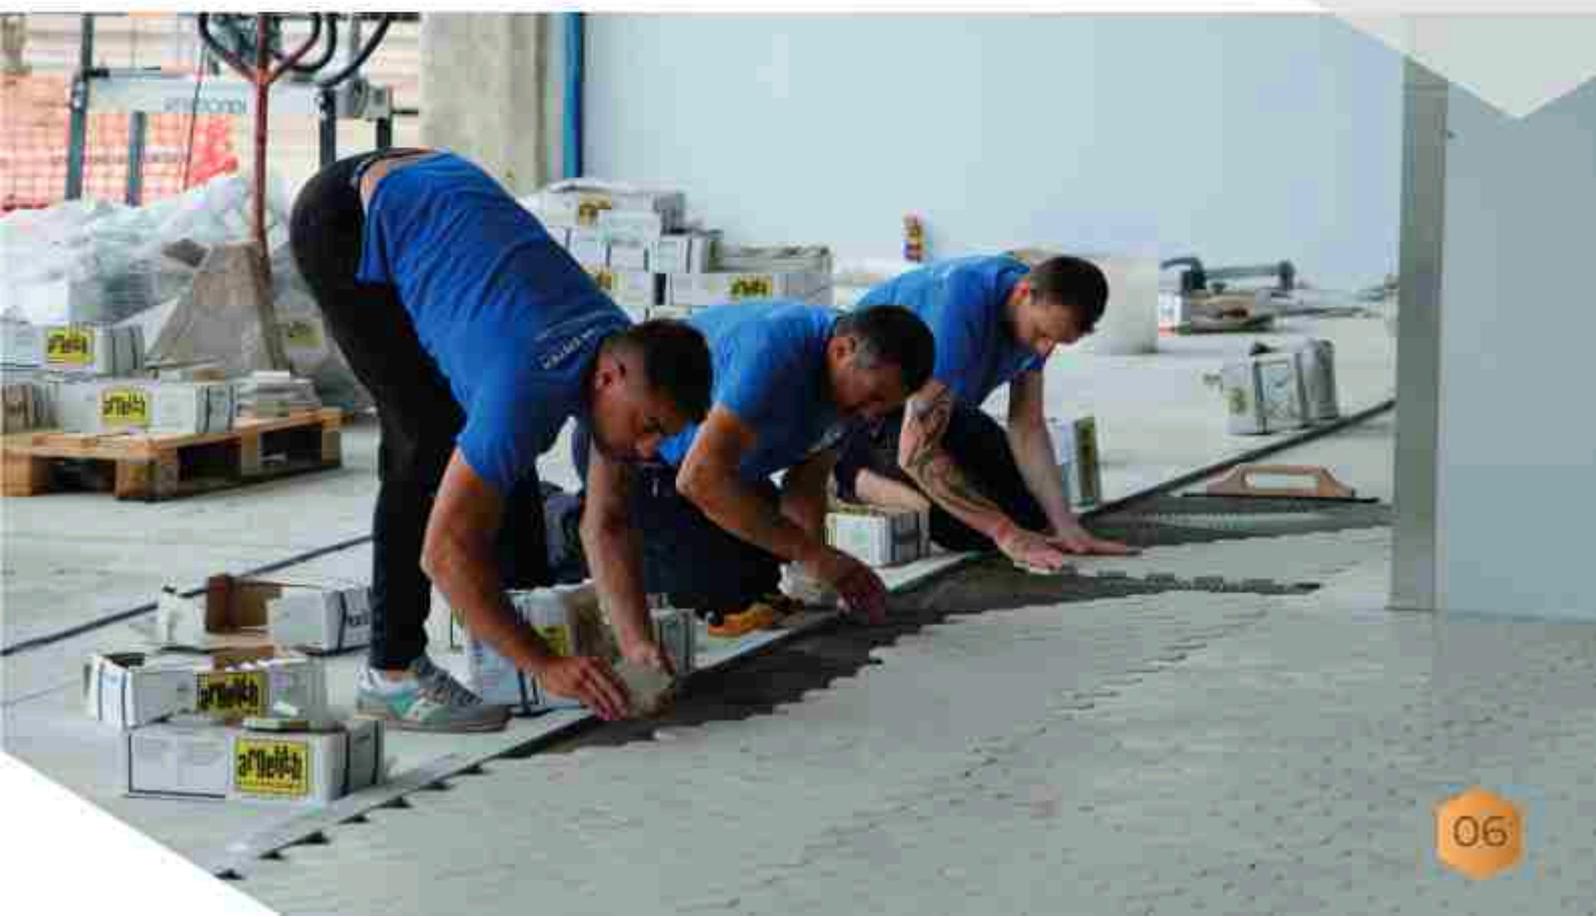

---

The quality of paving contributes greatly to the success of industrial paving.

In order to achieve a result that meets our very high quality standards, each stage of installation must be planned, followed and carried out with the utmost expertise.

More than 30 years experience in the laying and installation of anti-acid flooring and coatings in the agro-industry has allowed us to accrue specific skills to solve the critical issues of these floorings that are routinely raised by chemical, mechanical and thermo-hygrometric aggressions.

Our highly specialized team will personally follow all phases of cantier preparation, execution and delivery of the works in order to concretely meet the customer's expectations and the highest quality standards.

## SITE PREPARATION

This phase plays a fundamental role in the success of the paving. This is the reason why BUONOCORE has structured a technical service that makes available to its customers from the initial stages of the work over time, providing through a program of inspections practical and timely indications to the company for the preparation of the construction site.

## SCREED REALIZATION

The screed is the substrate of the tiling: the durability, efficiency and mechanical strength of the floor is highly dependent on the characteristics of the substrate which is why BUONOCORE deals directly with the realization of this fundamental component of the floor.

## TILE INSTALLATION

After preparing the substrate, the tiles are installed on the supporting screed through the utilization of special adhesives that allow the ceramic element to be durably connected to the substrate. This important stage is also performed directly by BUONOCORE's skilled workers: the experience gained in laying in hundreds of factories is made available to the customers who choose us through in-depth knowledge of the special materials used in hygienic industrial flooring.

## SEALING OF EPOXY RESIN JOINTS

After curing of the BUONOCORE adhesive, BUONOCORE proceeds to filling the joints with special certified epoxy resins with antibacterial and fungistatic effect. Sealing the joints requires great expertise and knowledge of the materials: Buonocore workers experience allows them to achieve the best results even in this very important phase.

## REALIZATION OF FRACTIONATION AND EXPANSION JOINTS

Flooring in the agri-food industry is subject to normal dimensional changes, both during curing and normal utilization. In order to absorb these movements, BUONOCORE installs deformable special joints within the flooring, that allow for expansion and contraction of the floor without damaging it.

# MATERIALS: OUR EXPERIENCE AT THE SERVICE OF YOUR NEEDS

---

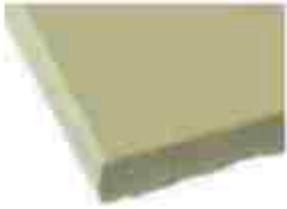

Thanks to the continuous activity of laying, BUONOCORE has tested for many years and selected the best materials and accessories constituting hygienic industrial flooring and offers them as an additional service to its customers, suggesting the characteristics of each one according to the specific needs of intended use.

The supply service offers the following materials:

- Anti-slip and anti-acid Klinker or Gress tiles
- Special hexagonal tiling
- Plinth and skirting boards with sanitary shelling
- Protective walls with hygienic steel profile
- Cement
- Supply of special epoxy resin grouts for sealing joints
- Supply of stainless steel gutters and drains with high hygienic efficiency
- Supply of quickly installed stainless steel drain pipes resistant to hot liquids and chemical aggression
- Supply of corner guards and technical elements for corner and edge connections
